

Add a slide transition

Slide Transitions

Slide transitions are animation-like effects that occur when you move from one slide to the next.

Office PowerPoint 2007 provides many types of slide transitions, including standard fades, dissolves, cuts, and wipes, as well as more unusual transitions such as wheels and checkerboards.

On the Animations tab, in the Transition to This Slide group, click the transition that you want.

You can choose other options in the **Transition to This Slide** group to control the transition speed, to add a sound, and to apply the same transition to all of the slides in the presentation.

EXAMPLE 1-1

Slide transitions are animation-like effects that occur when you move from one slide to the next. Office

PowerPoint 2007 provides many types of slide transitions, including standard fades, dissolves, cuts, and wipes,

as well as more unusual transitions such as wheels and checkerboards.

- **On the Animations tab, in the Transition to This Slide group, click the transition that you want.**

To preview how the current slide looks with a particular transition applied, rest your pointer on the thumbnail of that transition.

- **To see thumbnails of additional transitions, click the arrows next to the row of thumbnails.**
- **If you decide later that you want a different transition, click that transition to apply it.**

You can choose other options in the Transition to This Slide group to control the transition speed, to add a sound, and to apply the same transition to all of the slides in the presentation.
